SUMMARY

Final-year Information Technology graduate seeking an entry-level Software Engineer role, with hands-on experience across the software development lifecycle — requirements analysis, design, coding, unit and acceptance testing, and debugging. Builds REST APIs in Java (Spring Boot) and Python with an emphasis on secure coding practices (input validation, session management, authentication flows) and clean, well-documented code. Comfortable collaborating across teams, writing technical documentation, and using CI/CD (Jenkins) and Git in an agile workflow. Quick to learn new tools and eager to contribute to a collaborative engineering team.

TECHNICAL SKILLS

- **Languages:** Java, Python, SQL, C, JavaScript
- **Core CS & Engineering:** Data Structures & Algorithms, OOP, Design Patterns, SDLC & Agile Practices, Secure Coding, Unit & Acceptance Testing, Technical Documentation
- **APIs & Web:** REST APIs, JSON, Spring Boot, Servlets, FastAPI, HTML, CSS, React
- **Databases:** MySQL, Oracle
- **Tools & Testing:** Git, Postman, JUnit, Mockito, Jenkins
- **Also familiar with:** Office Suite, Microsoft Outlook

INTERNSHIP EXPERIENCE

Technical Support Intern | L4G

Jun 2024 – Nov 2024

- Diagnosed and resolved technical issues for a cohort of 500 learners, working directly with platform bugs and user-reported errors — sharpening troubleshooting and attention-to-detail skills applicable to debugging and optimizing software applications.
- Tracked recurring questions and fed them back into course material updates, cutting down repeat queries and demonstrating strong documentation and team knowledge-sharing habits.

PROJECTS

Job Application Tracker API (Spring Boot)

[GitHub](#)

- Built a REST API with Spring Boot 3 and Java 17 to manage job applications, covering CRUD endpoints and status transitions from Applied through Offer or Rejected — writing clean, maintainable code throughout.
- Wrote filtering queries with Spring Data JPA so applications could be pulled by status (e.g., Interviewing, Rejected) instead of scanning the full table.
- Handled JSON request/response bodies with input validation and mapped operations to the right HTTP status codes (201 Created, 204 No Content, 404 Not Found) for predictable client behavior.
- Used Lombok to cut down boilerplate and added unit tests around core endpoints with JUnit and Mockito, refining and rewriting test code as part of debugging and self-review before pushing changes.

Bus Reservation System (Java, Servlets, JDBC)

[GitHub](#)

- Built a full-stack ticket booking system with Java Servlets and JDBC, collaborating across the stack to design, code, and debug session-based booking and transaction logic.
- Applied secure coding principles to login, signup, and password-reset flows — server-side input validation, session management, and safeguarding user data — to protect user privacy and reduce common web vulnerabilities.
- Set up a Jenkins CI/CD pipeline to automate builds and catch integration errors before deployment, supporting an agile, test-driven development and release workflow.
- Built a responsive HTML5/CSS3 frontend for booking forms, ride history, and profile management, focused on a simple, low-friction user experience.

ACHIEVEMENTS

- Microsoft Certified: Azure AI Apps and Agents Developer Associate — Aug 2026
- GitHub Foundations Certificate — May 2025
- Associate Google Cloud Certificate — May 2025
- Java Foundations Associate, Oracle — Sep 2025

EDUCATION

Vasireddy Venkatadri Institute of Technology

2022 – 2026

- Bachelor of Technology, Information Technology | CGPA: 8.29
